## *Innovation meets with tradition*

We have been developing, producing and offering high-quality paints and coatings at our facility in Lüsslingen near Solothurn to a multilateral range of customers since 1906.

Today our progressive company prides itself as being a customer-oriented and innovative producer of high-tech coating systems.

We are pleased to share our extensive line of products and services with you on the following pages.

# DEVELOPMENT

## *Research for the future*

The high-performance laboratory infrastructure allows us to develop advanced technologies that ensure the high quality level of our vast product range.

Changes in legislation, new raw materials as well as new materials are the challenges that our chemists, laboratory workers and application specialists face. Our laboratory workers utilise analysis and implement solutions in a customer-centric manner.

# PRODUCTION

## *Powerful and flexible*

Our comprehensive and versatile machinery platform allows us to produce a varied batch volume. We are thus in a position to provide flexibility and expedience in deriving solutions in a changing marketplace.

ECLATIN produces a comprehensive range of paints and coatings from a vast number of high-quality raw materials. Fiscal targets and environmental practices are integral in our company and are applied accordingly.

# CONSULTING SALES

8

9

## *Customer-oriented and competent*

The core tasks of our sales department are to ensure seamless order processing, to provide sound professional advice and to organise the coordination between production and the customers' needs.

Our certified in-house experts offer insightful support concerning manifold colour matrices and other application matters. Our well trained and professional field-service staff provide hands-on expertise to our customers on site.

# OBJECT SUPPORT

## *Your object, our experience*

Our supportive and committed application technicians support our customers from start to completion. We offer consulting services ranging from sandblasting quality through to layer thickness supervision.

We work together with testing institutes in order to develop practical solutions for our customers to ensure the surface quality with the desired outcome. ECLATIN guarantees the supervision of coating systems according to TL/TP – KOR.

# INDUSTRY COATINGS

## *Aesthetical and durable*

Our state of the art and cost and time-saving coating systems protect the most diverse metal and synthetical surfaces delivering an aesthetically pleasing and durable result. The diverse ECLATIN product line responds well with a broad number of physical material properties and delivers a compliant wet coating. We develop turn-key solutions that are specifically tailored to our clients' requirements and detailed specifications.

# HYDROMECHANICAL WORKS

14

15

## *Conservation of value for the future*

ECLATIN is one of the leading manufacturers of high-resistant coating systems for hydraulic steel structures. Tested and certified systems ensure safety and longevity.

In shipyards, on a bridge in harsh climate or in wet, cold environments: moisture-curable PU coatings offer exceptional application possibilities even in the most adverse climatic conditions – without impairment of drying times or compromising quality.

# CORROSION PROTECTION

16

17

## *Economical and durable*

Cost-effective steel structure protection has been a central ECLATIN component for decades. However, durable protection is not the only criteria. Coating for mere protection purposes has become an important aesthetic matter. Uniform delivery of colour, functionality and aesthetics! ECLATIN has been a pioneer in the development of modern and efficient coating systems and has been setting positive trends in the market for years.

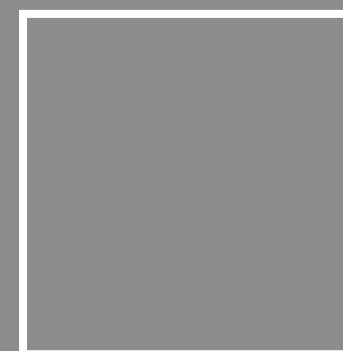

# WEAR PROTECTION

18

19

## *Resistant*

ECLATIN delivers protection against abrasive wear with systems that protect against corrosion and also stand up to high mechanical, chemical and thermal stress. Our modern, highly reactive systems absorb sound and vibrations, prevent abrasive damage at expensive facilities and deliver exponential life of the product many times over. Elasticity and durability - combatting the forces of nature!

# WATER PROTECTION

20

21

## *Protection of the environment*

Storage of liquid chemicals are an ever-present potential danger to groundwater, rivers and lakes. Our tested and certified systems offer safe protection for reservoirs, containers and storage tanks – equally applicable for reconstructions and new installations.

The protection of drinking water pools is of particular importance. We deliver specially formulated food compatible coatings.

# PACKAGING COATINGS

*High quality content  
safely packaged*

The packaging industry places high demands on applied coatings. The robust adhesion to the most diverse level surfaces combined with high chemical resistance and material flexibility form the basis for our guaranteed products and services. Our customers' needs are always met. Our certified and proven protective coatings meet the high requirements in many segments of the internal and external protection of synthetic and metal containment environments.
